SUMMARY

Frontend Developer with 7+ years of experience building fast, scalable, and maintainable web applications. Proficient in React (Hooks), Next.js, and Tailwind CSS, with hands-on experience in Shopify custom development using Liquid. Proven track record of solving real performance problems including an 80% reduction in GraphQL-driven load times on a high-traffic e-commerce platform and a 35% checkout speed improvement. Comfortable working in teams and delivering end-to-end as a solo developer. Passionate about clean architecture, UX quality, and shipping products that perform.

TECHNICAL SKILLS

Languages & Core : HTML5, CSS3/SCSS/SASS, JavaScript

Frameworks & Libraries : ReactJS (Hooks), NextJS, Vue.js, Tailwind CSS

Shopify : Shopify Development, Liquid

Backend & APIs : RESTful APIs, GraphQL, MySQL, PHP

Testing & QA : Unit Testing, Selenium Testing

Tools & Workflow : Git, Figma, Docker, Postman, Responsive Design, AI Tools

PROFESSIONAL EXPERIENCE

Frontend Developer (Contract), Island Rituals

Jan 2026 - March 2026

- Sole frontend developer on a Shopify storefront built all custom Liquid templates, sections, and CSS from scratch with no theme dependencies
- Achieved a healthy Core Web Vitals / PageSpeed score through performance-first build decisions
- Owned the full frontend delivery independently, from design interpretation to production launch

React Developer, Bridzia Sdn Bhd

July 2024 - July 2025

- Improved checkout page load speed by 35% through targeted performance optimizations and clean architecture refactoring
- Built modular, scalable React applications with reusable component libraries to reduce future dev overhead
- Delivered responsive UIs meeting modern UX standards across mobile and desktop breakpoints

Front End Developer, SIRCLO

Jan 2019 - June 2024

- Built and scaled React-based frontend systems serving high-traffic platforms
- Developed a reusable UI component library that improved team development speed and cross-product consistency
- Delivered pixel-perfect responsive interfaces aligned with design system specifications

EDUCATION

Bachelor of Science in Computer Science (3.16)

2012 - 2018

Christian Duta Wacana University

- Major in Information Technology.

KEY PROJECTS

Guardian Malaysia – E-commerce Platform Optimization

Worked as part of a 4-person team on Guardian Malaysia, one of the largest health and beauty retail chains in Malaysia. Diagnosed a critical performance bottleneck on Guardian Malaysia's cart and checkout pages caused by over-fetching in nested GraphQL queries. As part of a 4-person team, analyzed actual UI data requirements, restructured queries, and removed redundant fields. Result: 80% reduction in cart and checkout load time, directly improving user experience and conversion rate on one of Malaysia's largest health and beauty retail platforms.

Seiko Boutique Indonesia – Shopify Site

Shopify Site Delivered a full Shopify e-commerce site for a prestigious global watch brand within 3 days, working as the sole developer. Handled the complete build — theme customization, UI/UX implementation, product configuration, and deployment. Result: a clean, responsive, fast-loading storefront launched on time with no post-launch issues.

Island Rituals — Shopify Storefront (Contract)

Sole frontend developer responsible for building the complete Shopify storefront from scratch. Wrote all custom Liquid templates, sections, and CSS independently without relying on a pre-built theme. Managed the full frontend delivery from design interpretation to production deployment. Result: healthy Core Web Vitals and PageSpeed rating, delivering a fast, brand-consistent storefront.

GitHub Repository Explorer (React · TypeScript · GitHub API)

Built a React TypeScript application integrating with the GitHub REST API to search users and browse their repositories. Implemented mobile-optimized dropdown views, smooth animations, keyboard navigation, loading/error states, and responsive layouts across breakpoints. Result: a fully responsive, production-deployed tool showcasing API integration and component-driven architecture
